Rafael:

The dock in orange was never connected to redfish bay. The one in green was the one associated with the piping that leaked. The one in orange was put in later and new piping put in to go to this dock.

The reason for this inquiry is because we are trying to see if there is a way that Lazarus may be able to get a performance bond using the dock as collateral. Apparently, they will have difficulty getting a performance bond if it is part of the Superfund Site. Thus it may be difficult to move the removal dollars over to the remedial work until everything is completed.

Thanks

Rafael:

The dock you are referring to is the one in green. The dock I am referring to is the one in orange (This is the dock that Superior is using although it is owned by NORCO (I think)). We have never done anything here at this dock.

Thanks

Gary, yes, early on during the RI we had a discussion with NORCO about the docking facility and considered it part of the Site investigation. We sampled the sediments, in Red Fish Bay, near the dock facility during the Phase I RI and plan to sample again during Phase II. Also, we considered the pipelines extending from the main facility to the docking facility as part of the Site as well. As you are aware, these pipelines, except for the active ones, have been cleaned under a removal action

several years ago.

Rafael/Gloria:

Lazarus is asking me if the dock are that Superior Crude is using that belongs to the facility is part of the site. They want to get a loan against it to possibly get me my performance bond and then get you the money I have in house. I don't remember it being or us considering it part of the site but I need your feedback.
